

OTX23-002 OUTDOOR BROADBAND TRANSMITTER

- **Broadband Transmitter, AM, FM, Digital Capability**
- **Can Feed Multiple Receivers**
- **Modular Design, Upgradeable**
- **Point-to-Point or Point-to-Multi-point Applications**

PRODUCT APPLICATION:

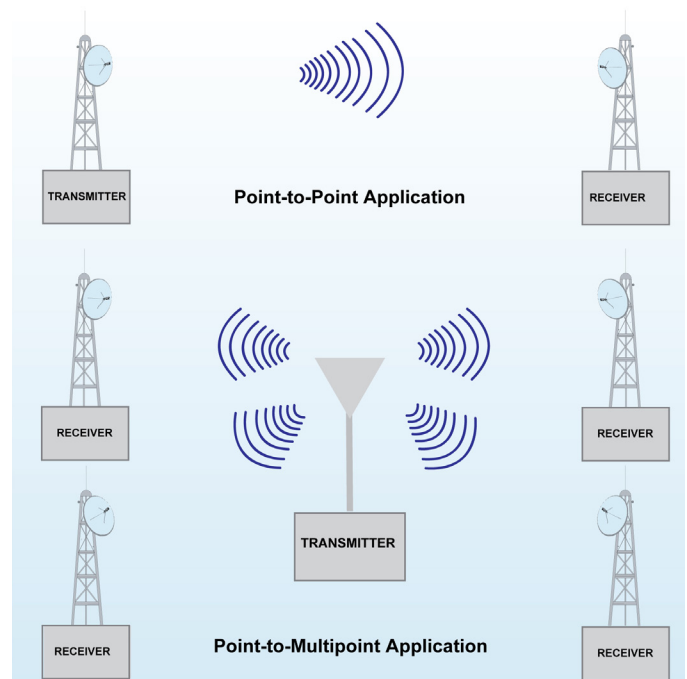

The OTX23-002 Transmitter is an outdoor, solid state, broadband transmitter designed to implement high quality, cost-effective microwave links for transporting AM, FM, or digital TV channels as well as data.

This transmitter can be used to feed a single link or several links simultaneously.

The OTX23-002 features operating diagnostics such as output signal level monitoring, phase-lock status and power supply voltages. Remote diagnostics monitoring is offered as an option.

The transmitter incorporates an Automatic Gain Control (AGC) circuit for gain control over its operating temperature range, and a State-of-the-Art low-noise crystal-controlled reference oscillator and solid state GaAs power amplifier for best reliability and performance.

Designed for many years of trouble-free operation in an outdoor environment, the OTX23-002 can be easily upgraded to the higher power units of the OTX23 family.
